

Ahmed Hamdi

Software Developer

✉ ahmedhamdisaeed@gmail.com ☎ 00201092925659 📍 Cairo (ready to relocate) 🔗 Portfolio

Profile

Software Engineer with 3 years of experience in full-stack and back-end development using .NET technologies, coupled with freelance contract work designing scalable APIs, managing databases, and delivering client projects independently

Professional Experience

Software Developer, Ether Tech Company 01/2025 – Present | Cairo, Egypt

- Contributed to the development and maintenance of Mawred HR System, a widely used HR platform in Saudi Arabia.
- Designed and implemented RESTful APIs using .NET Core.
- Built and optimized Angular components for a responsive and user-friendly HR interface.

Software Developer, Al Mostakbal Technology Company 07/2024 – 12/2024 | Cairo, Egypt

- Developed and maintained web applications using ASP.NET Web API.
- Implemented front-end functionality using JavaScript, HTML, CSS, and Angular.

Company Information: Al Mostakbal Technology Company specializes in developing software solutions for the healthcare sector, focusing on projects for hospitals.

Software Engineer / Full-Stack Developer | Freelance & Independent Contracting 10/2023 – 06/2024

- Designed, built, and deployed scalable RESTful APIs and full-stack web applications for private clients using .NET Core, ASP.NET Web API, and Angular.
- Engineered custom database solutions utilizing SQL Server and MongoDB, applying EF Core and Dapper for optimized query execution and data migrations.

Education

Pre-Master’s Program in Computer Science, Cairo University 2026 – Present

Postgraduate Diploma in Computer Science, Cairo University 2022 – 2024
GPA 3.00

Bachelor of Commerce in statistics, Zagazig University 2018 – 2022
Percentage %86.7

Skills

- Microsoft SQL Server, MongoDB - Dapper, Entity Framework - ASP.NET Core ,ABP Framework - RabbitMQ - Microservices - Microsoft Power Platform	- HTML5 - CSS3 - Docker - JavaScript, TypeScript - Angular	Soft Skills - Time Management - Communication Skills - Presentation Skills.
--	--	--

Internship

ITI 9 Months Diploma, Professional Web Development & CRM track, ITI 10/2023 – 06/2024

Intensive 4-month training program at ITI, Full Stack Web Development using .NET, ITI 03/2023 – 07/2023

Projects

ERP Platform (Full-Stack Enterprise System) | Repo ☑ Designed and developed a modular ERP platform using **ABP Framework, .NET, and Angular**, covering HR, Inventory, Sales, Finance, Workflow, and AI-assistant capabilities.

- **Backend:** Developed **ABP Framework** application services and REST APIs, implemented cross-module workflows, approvals, reporting, and business validations.
- **Data:** Used **Entity Framework Core** migrations and service-layer validations to improve data consistency.
- **Frontend:** Built scalable **Angular** applications with standalone components, signals, role-based navigation, API integration, and live backend data.

Sahm Smart Restaurant POS Dashboard | Repo [↗](#) Angular 18, TypeScript, NgRx SignalStore, RxJS, Jest

- Built a restaurant POS dashboard with live order management, kitchen monitoring, and product search.
- Implemented reactive state management, offline support, AI order suggestions, and simulated real-time updates.
- Improved performance using lazy loading, OnPush, Angular Signals, and RxJS.

Distributed Event-Driven Microservices Web Analytics Aggregator | Repo [↗](#) | Live Demo [↗](#) | C# | .NET 8 | Microservices | RabbitMQ | SQL Server | Docker | JWT

- Architected a .NET 8 microservices system using Clean Architecture and DDD, comprising Ingestion, Worker/Consumer, and Reporting API services.
- Implemented event-driven processing with RabbitMQ to asynchronously ingest and aggregate pageviews and Core Web Vitals (FCP, LCP, CLS) into SQL Server.
- Containerized the ecosystem with Docker Compose and implemented JWT authentication, Swagger/OpenAPI, xUnit testing, and GitHub Actions CI/CD.

Library Management System (LMS) — ASP.NET API & Angular

Full-stack LMS with features for both users and admins, supporting book borrowing, tracking, and notifications.

Back-End (ASP.NET Core Web API) [↗](#)

- N-Tier architecture with EF Core & SQL Server
- Book, author, member, and borrowing modules
- Hangfire scheduled jobs for due-date & overdue notifications

Front-End (Angular) [↗](#)

- User side: browse books, view details, manage loans
- Admin side: manage books, authors, categories, members, and transactions
- Responsive UI with guards, interceptors, and API integration

Developed an Airbnb-like platform using ASP.NET API and Angular

- Back-end [↗](#): Designed and implemented the room reservation system, handling booking logic, availability checks, and database transactions using Entity Framework Core and SQL Server.
- Front-end [↗](#): Created the room booking interface in Angular, integrating the API to allow users to search, book, and manage reservations.
